

CHAPTER 1

INTRODUCTION

1.1 Project Overview

The project “A CRM Application for TheChaiShop&Co” focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer, employer, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The CRM application provides a centralized platform for managing customer information, employer details, enterprise accounts, orders, billing calculations, reports, and dashboards. It helps sales representatives and managers access and manage business information efficiently.

The system also supports the differentiation of online and offline customer records using record types. Automated calculations are used to determine order quantity and total bill amount, which helps reduce manual errors. Reports and dashboards provide useful sales information for analysis and decision-making.

The application also includes automated email notifications for customer birthdays. This helps TheChaiShop&Co provide personalized offers and improve customer engagement and loyalty.

1.2 Purpose

The purpose of this project is to:

- Streamline customer relationship management.
- Automate billing and order calculations.
- Improve data accuracy.
- Enable data-driven decision-making.
- Enhance customer engagement through email automation.

The CRM application is designed to reduce manual work, maintain accurate customer and business records, automate important sales activities, and provide useful reports and dashboards for effective business management.

CHAPTER 2

IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

The ideation phase focuses on identifying the major problems faced by the users while managing customer relationships, orders, billing, sales records, and customer communication.

The following customer problem statements were identified for the project “A CRM Application for TheChaiShop&Co”.

PS-1: Sales Representative Customer:

Sales Representative

I’m trying to:

Manage customer orders and billing.

But:

Calculations are often incorrect.

Because:

Order quantity and billing are handled manually.

Which makes me feel:

Stressed and inefficient.

PS-2: Store Manager Customer:

Store Manager

I’m trying to:

Monitor sales and customer records.

But:

Reports are delayed and incomplete.

Because:

Data is stored in multiple files.

Which makes me feel:

Confused and dissatisfied.

PS-3: Customer

Customer: Customer

I’m trying to:

Receive personalized offers and updates.

But:

I do not get timely notifications.

Because:

There is no automated communication.

Which makes me feel:

Disconnected and undervalued.

2.2 Empathy Map Canvas

Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

Empathy Analysis

Think & Feel:

Need accurate customer data and reports.

Hear:

Feedback from management.

See:

Multiple registers and spreadsheets.

Say & Do:

Enter data manually.

Pain:

Errors, delays, and data loss.

Gain:

Automation and fast report

2.3 Brainstorming

Brainstorming was conducted to identify possible solutions for improving customer relationship management, sales processing, billing, reporting, and customer communication.

Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM
- Salesforce-based CRM • Automated email system

Selected Idea:

Salesforce-based CRM Application for TheChaiShop&Co.

The Salesforce-based CRM application was selected as the proposed idea because the project requires customer data management, sales automation, billing calculations, reporting, dashboards, and automated email communication.

CHAPTER 3

REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

The Customer Journey Map describes the different stages followed by a user while using the CRM application. It helps to understand the complete flow of activities from accessing the system to making business decisions.

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

The customer journey begins when the user logs into the Salesforce CRM application. After accessing the application, the user enters customer information and generates orders. The system automatically calculates the order quantity and total bill amount. The user can then view reports and dashboards to analyze the sales information and support decisionmaking.

3.2 Solution Requirements

3.2.1 Functional Requirements

Functional requirements describe the major functions and services that the CRM application should provide to its users.

FR No. Requirement

FR-1 User Login

FR-2 Object Creation

FR-3 Data Entry

FR-4 Billing Automation

FR-5 Report Generation

FR-6 Email Automation

FR-1: User Login

The system should allow authorized users to securely log in to the CRM application using valid credentials.

FR-2: Object Creation

The system should provide custom objects for managing Customer Account, Employer Account, and Enterprise Account information.

FR-3: Data Entry

The system should allow users to enter and maintain customer, employer, enterprise, and order-related information.

FR-4: Billing Automation

The system should automatically calculate order quantity and total bill amount using formula fields based on the selected products and items.

FR-5: Report Generation

The system should generate reports related to customer accounts, enterprise accounts, and sales information for analysis.

FR-6: Email Automation

The system should automatically send email notifications to customers for birthdays, offers, and other required updates.

3.2.2 Non-Functional Requirements

Non-functional requirements define the quality, performance, security, reliability, and scalability requirements of the CRM application.

NFR-1: Usability

The system should be easy to use for sales representatives, managers, administrators, and analysts without requiring technical training.

Requirements:

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-understand forms
- User-friendly dashboards

Example:

A new sales employee should be able to log in, enter customer details, and generate orders within a few minutes without help.

Salesforce Lightning UI provides drag-and-drop features and easy navigation.

NFR-2: Security

The system must protect customer and business data from unauthorized access.

Requirements:

- Role-based access control
- Secure login authentication
- Encrypted data storage • Data backup and recovery Examples:
- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

NFR-3: Reliability

The CRM system should work correctly at all times and store data accurately without loss.

Requirements:

- Automatic data saving
- Regular system backups
- Error handling mechanisms
- Stable cloud environment

Example:

If a user enters order data and the internet disconnects, the system should save the information and restore it later. Salesforce cloud ensures automatic backups.

NFR-4: Performance

The system should respond quickly and handle large amounts of data efficiently.

Requirements:

- Fast page loading

- Quick report generation
- Smooth dashboard rendering
- Minimal delay

Example:

When a manager generates monthly sales reports for hundreds of customers, the report should load within 2–3 seconds.

Optimized queries and caching improve speed.

NFR-5: Availability

The system should be accessible whenever required.

Requirements:

- 24/7 system availability
- Minimal downtime
- Cloud-based hosting
- Disaster recovery

Example:

Managers should be able to access the CRM system during peak business hours, weekends, or late nights.

Salesforce cloud provides high uptime.

NFR-6: Scalability

The system should support business growth without affecting performance.

Requirements:

- Ability to handle more users
- Support increasing customer data
- Expandable storage • Maintain system speed

Example:

If TheChaiShop&Co expands to multiple branches, the CRM system should support thousands of customers without slowing down. Salesforce infrastructure automatically scales.

3.3 Data Flow Diagram

The data flow of the CRM application follows the sequence:

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards

The user interacts with the Salesforce Lightning UI to enter and manage information. The data is stored in custom objects and validated using validation rules. Salesforce Flows automate required activities. The processed data is then used to generate reports and dashboards for analysis.

3.3 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

The technology stack provides the required environment for developing, managing, automating, and analyzing the CRM application.

CHAPTER 4

PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

4.2 Proposed Solution

The proposed CRM application provides a Salesforce-based platform for managing customer, employer, and enterprise information. The system supports customer record management, order management, automated billing, validation, record types, email notifications, workflow automation, reports, dashboards, data backup, and user role management.

Functional Requirement

Parameter	Description
User Login & Authentication	Allows authorized users to securely log in to the CRM system using valid credentials.
Customer Record Management	Enables users to create, view, update, and delete customer details such as name, contact number, and address.
Employer & Enterprise Management	Allows management of employer and enterprise account information for business operations.
Order Management	Supports creation and tracking of customer orders, including order quantity and product details.
Automated Billing System	Automatically calculates total bill amount using formula fields based on order quantity and pricing.
Validation Rules	Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar.
Record Types & Page Layouts	Provides different record types and layouts for various customer and enterprise categories.
Global Picklists	Maintains standardized values for fields such as product type, category, and status.
Email Notification System	Sends automated emails to customers for birthdays, offers, and order confirmations.
Workflow & Flow Automation	Automates tasks such as updating records and triggering alerts using Salesforce Flows.
Report Generation	Generates detailed reports on sales, customers, and enterprise performance.
Dashboard Visualization	Displays real-time analytics through interactive dashboards and charts.
Data Backup & Recovery	Ensures secure storage and recovery of business data in the Salesforce cloud.
User Role Management	Controls system access using profiles and permission sets for different users.

4.3 Solution Architecture

The CRM application follows a layered architecture. The architecture divides the system into different layers so that each layer performs a specific function. This structure supports modularity, scalability, and maintainability.

Architecture Layers

1. Presentation Layer – Lightning UI

The Presentation Layer provides the user interface through Salesforce Lightning. Users interact with the CRM application through the Lightning interface.

2. Application Layer – Flows and Logic

The Application Layer handles application logic and automation using Salesforce Flows and other configured logic. It supports automated processes such as notifications and data processing.

3. Data Layer – Custom Objects

The Data Layer stores the business information using custom objects. Customer, Employer, and Enterprise data are maintained systematically in the Salesforce cloud.

4. Analytics Layer – Reports and Dashboards

The Analytics Layer provides reports and dashboards for analyzing sales and customer information. It helps users understand business data and supports decision-making.

This layered architecture ensures **modularity, scalability, and maintainability** of the CRM application

CHAPTER 5

PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project followed an Agile-based development approach with defined milestones and sprints. The development process was divided into different activities to systematically build and configure the Salesforce CRM application.

The major planning activities included:

- ❖ A Salesforce Developer account was created to set up the development environment.
- ❖ Custom objects were designed to store customer, employer, and enterprise data.
- ❖ Custom tabs and a Lightning Application were developed for easy system navigation.
- ❖ Fields, relationships, and global picklists were configured to ensure data consistency.
- ❖ Page layouts and record types were created based on user roles and customer categories.
- ❖ Validation rules were implemented to prevent incorrect data entry.
- ❖ Email templates and automated flows were developed for customer notifications.
- ❖ Reports and dashboards were created for performance monitoring and analysis.
- ❖ Regular sprint reviews and testing were conducted to track progress and resolve issues.
- ❖ The project was completed within the planned timeline through systematic scheduling.

5.2 Product Backlog, Sprint Schedule, and Estimation

The product backlog contains the functional requirements and user stories required for developing the CRM application. The work was divided into different sprints according to the development activities, priority, story points, and team members.

Product Backlog and Sprint Schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Points	Priority	Team Member
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account so that I can configure and deploy the TheChaiShop&Co CRM application.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored and managed systematically.	3	High	Member2
Sprint-2	Data Modeling	USN-3	As a user, I want separate tabs for each object so that I can easily navigate and manage CRM records within the application.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As a manager, I want a dedicated Lightning App so that all CRM operations are accessible from a single dashboard.	3	High	Member4
Sprint-2	Data Modeling	USN-5	As an admin, I want to create customer and order fields so that complete sales and billing details can be captured accurately.	5	Medium	Member1
Sprint-2	Data Modeling	USN-6	As a user, I want customized page layouts for different record types so that only relevant information is displayed during data entry.	5	High	Member2
Sprint-2	Data Modeling	USN-7	As a manager, I want separate record types for Retail and Enterprise customers so that different business categories can be managed efficiently.	5	Medium	Member3
Sprint-3	Automation	USN-8	As a system, I want to validate customer details and order inputs so that incorrect data entries are prevented.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows to send email notifications so that customers receive timely updates and offers.	5	High	Member1
Sprint-4	Automation	USN-10	As a system, I want to automatically calculate billing amounts so that invoices are generated without manual effort.	5	High	Member2
Sprint-5	Reports	USN-11	As a manager, I want sales and customer reports so that I can monitor business performance and make informed decisions.	4	High	Member3
Sprint-6	Dashboards	USN-12	As a manager, I want visual dashboards so that I can quickly analyze sales, customers, and enterprise performance.	4	Medium	Member4

5.3 Project Tracker, Velocity & Burndown Chart

The project tracker was used to monitor sprint progress, story points, sprint duration, planned dates, completed story points, and actual release dates.

Sprint Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	—	—
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	—	—
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	—	—

The sprint-based planning approach helped organize the development activities into manageable stages. Each sprint focused on specific functional requirements such as develop setup, data modeling, automation, reports, and dashboards. This helped the development process progress systematically according to the planned schedule.

CHAPTER 6

PROJECT DEVELOPMENT PHASE

Project Flow

The development of the TheChaiShop&Co CRM application was carried out through a sequence of milestones. Each milestone focused on configuring and implementing a specific part of the Salesforce CRM application.

The project development flow consists of the following milestones:

1. Milestone 1: Creation of Developer Account
2. Milestone 2: Object Creation
3. Milestone 3: Tabs
4. Milestone 4: The Lightning App
5. Milestone 5: Global Picklist
6. Milestone 6: Fields and Relationships
7. Milestone 7: Creation of Page Layout
8. Milestone 8: Creation of Record Types
9. Milestone 9: Validation Rules
10. Milestone 10: Email Templates
11. Milestone 11: Flows
12. Milestone 12: Reports and Dashboards
13. Milestone 13: Conclusion

What You'll Learn

The project development phase covers the following Salesforce concepts:

1. Real Time Salesforce Project
2. Standard and Custom Objects
3. Picklist Value Sets
4. Types of Fields & their Relationships
5. Page Layouts
6. Record Types

7. Validation Rules
8. Email Templates
9. Flows
10. Reports and Dashboards

Implementation

Milestone 1 - Salesforce Developer Account Creation

Activity 1: Creating Developer Account

A Salesforce Developer Org was created for developing and configuring the CRM application.

1. Go to the Salesforce Developer website.
2. On the sign-up form, enter the following details:
 - First Name & Last Name
 - Email
 - Role: Developer
 - Company: College or Company Name
 - Country: India
 - Postal Code: PIN Code
 - Username: A combination of name and company
 - The username should follow the required username format.
3. Click Sign Me Up after entering the required details.

Activity 2: Account Activation

1. Go to the inbox of the email used while signing up.
2. Click on the verification link to activate the account.
3. Click on Verify Account.
4. Create a password, answer the security question, and click on Change Password.
5. The user will then be redirected to the Salesforce Setup page.

Milestone 2 - Objects

The CRM application uses custom objects to store and manage business information. The objects created for the application are Employer Account, Customer Account, and Enterprise Account.

1. In the Salesforce Org, click the Gear icon on the top left.
2. Select Setup to open the Setup page.
3. Click the Object Manager tab.
4. Select Create → Custom Object.

Activity 1: Employer Account Object

The Employer Account object is created to maintain employer information.

1. From the Setup page, click Object Manager.
2. Click Create → Custom Object.
3. Enter the following details:
 - Label: Employer Account
 - Plural Label: Employer Accounts
 - Record Name: Employer Account Name
 - Data Type: Text
4. Under Optional Features, select:
 - Allow Reports
 - Allow Activities
 - Track Field History
5. Select Allow Search.
6. Click Save.

Activity 2: Customer Account Object

The Customer Account object is created to store customer information.

1. From the Setup page, click Object Manager.
2. Click Create → Custom Object.
3. Enter the following details:
 - Label: Customer Account

- Plural Label: Customer Accounts
 - Record Name: Customer Account Name
 - Data Type: Text
4. Under Optional Features, select:
 - Allow Reports
 - Allow Activities
 - Track Field History
 5. Select Allow Search.
 6. Click Save

Activity 3: Enterprise Account Object

The Enterprise Account object is created to manage enterprise account information.

1. From the Setup page, click Object Manager.
2. Click Create → Custom Object.
3. Enter the following details:
 - Label: Enterprise Account
 - Plural Label: Enterprise Accounts
 - Record Name: Enterprise Account Name
 - Data Type: Text
4. Under Optional Features, select:
 - Allow Reports
 - Allow Activities
 - Track Field History
5. Select Allow Search.
6. Click Save.

Milestone 3 - Tabs

Activity 1: Custom Tabs Creation

Custom tabs are created to provide easy navigation to the different CRM objects.

1. Go to the Setup page.
2. Type Tabs in the Quick Find bar.
3. Click Tabs.
4. Click New under Custom Object Tabs.
5. Select the object Employer Accounts.
6. Select the required tab style.
7. Click Next.
8. On the Add to Profiles page, keep the default settings.
9. Click Next.
10. Under Add to Custom App, uncheck Include Tab.
11. Make sure Append tab to users' existing personal customizations is checked.
12. Click Save.
13. Repeat the same steps for Customer Accounts and Enterprise Accounts.

Milestone 4 - The Lightning App

Activity 1: Create a Lightning App

The Lightning App provides a centralized interface for accessing the CRM objects and features.

1. Go to the Setup page.
2. Search for App Manager in Quick Find.
3. Select App Manager.
4. Click New Lightning App.
5. Fill in the App Details and Branding:
 - App Name: TheChaiShop&Co
 - Developer Name: Auto Populates
 - Add Image: Optional
 - Primary Color: Enter the required Hex value or leave it as default.
6. Click Next.

App Options

- Navigation Style: Standard Navigation
- Setup Experience: Setup
- Supported Form Factors: Desktop and Phone

7. Click Next.

Utility Items

- Utility Bar Alignment: Default

8. Click Next.

Navigation Items

Select the created Custom Objects and required Standard Objects:

- Customer Accounts
- Employer Accounts
- Enterprise Accounts
- Reports
- Dashboards

User Profiles

Add the following user profile:

- System Administrator

9. Click Save & Finish.

Milestone 5 - Global Picklist

Activity 1: Create Global Picklist

Global Picklists are created to maintain standardized values throughout the CRM application.

1. In the Quick Find box, search for Picklist Value Sets.
2. Click New.

Global Picklist 1: Gender

- Label: Gender
- Name: Auto Populates
- Values:

- Male
- Female
- Others

3. Click Save & New.

Global Picklist 2: Items

- Label: Items
- Name: Auto Populates
- Values:
 - Platinum Tea Powder
 - Double Delight Tea Powder
 - Super Dust Tea Powder
 - Osmania Biscuits (Value Pack)
 - Osmania Biscuits (Premium Pack)
 - Dry Fruit Biscuits
 - Fruit Biscuits
 - Salt Biscuits
 - Multigrain Biscuits
 - Ragi Biscuits
 - Double Choco Chip Cookies
 - Butter Almond Cookies
 - Melting Moments Cookies
 - Honey Oats Cookies
 - Delight Box
 - Signature Box
 - Assorted Box

4. Click Save & New.

Global Picklist 3: Payment Mode

- Label: Payment Mode

- Name: Auto Populates
- Values:
 - Gpay
 - PhonePe
 - Paytm
 - Credit or Debit Card
 - Cash

5. Click Save & New.

Global Picklist 4: Type of Items

- Label: Type of Items
- Name: Auto Populates
- Values:
 - Tea Powder
 - Cookies
 - Gift Hampers

6. Click Save.

Milestone 6 - Fields & Relationships

Activity 1: Create Custom Fields for Employer Account

1. In the Salesforce Org, click the Gear icon and select Setup.
2. Click Object Manager.
3. Search for Employer Account in the Quick Find box.
4. From the sidebar, click Fields & Relationships.
5. Click New to create a custom field.
6. Select the required data type.
7. Click Next.

Fields Created for Employer Account

1. First Name

- Data Type: Text

- Field Label: First Name
- Length: 25
- Required: Checked

2. Last Name

- Data Type: Text
- Field Label: Last Name
- Length: 25
- Required: Checked

3. Gender

- Data Type: Picklist
- Field Label: Gender
- Values: Use Global Picklist Value Set – Gender
- Required: Checked

4. Phone Number

- Data Type: Phone
- Field Label: Phone Number
- Required: Checked

5. Email ID

- Data Type: Email
- Field Label: Email ID
- Required: Checked

6. Date of Birth

- Data Type: Date
- Field Label: Date of Birth
- Required: Checked

7. Aadhar Number

- Data Type: Text
- Field Label: Aadhar Number

- Length: 12

8. PAN Details

- Data Type: Text
- Field Label: PAN Details
- Length: 10

9. Designation

- Data Type: Picklist
- Field Label: Designation
- Values:
 - Manager
 - Finance and Accounting
 - Kitchen Staff
 - Cashier
 - Servers

10. Salary

- Data Type: Currency
- Field Label: Salary

For each field, click Next → Next → Save and New. After creating the final field, click Save.

Activity 2: Create Custom Fields for Customer Account

The Customer Account object contains customer information, purchase details, billing information, and employer association.

The following fields are created:

1. First Name
 - Data Type: Text
 - Length: 25
 - Required
2. Last Name
 - Data Type: Text

- Length: 25
- Required
- 3. Gender
 - Data Type: Picklist
 - Values: Gender Global Picklist
 - Required

- 4. Phone Number
 - Data Type: Phone
 - Required

- 5. Date of Birth
 - Data Type: Date
 - Required

- 6. Date of Birthday is today ?
 - Data Type: Formula
 - Formula Return: Checkbox

The formula checks whether the customer's date of birth matches the current day and month.

- 7. Email ID
 - Data Type: Email
 - Required

- 8. Address
 - Data Type: Text
 - Length: 125

- 9. Type of Items
 - Data Type: Multi Select Picklist
 - Values: Type of Items Global Picklist
 - Required

- 10. Products purchased

- Data Type: Multi Select Picklist
- Values: Items Global Picklist
- Required

11. Chai

- Data Type: Multi Select Picklist
- Values:
 - TheChaiShop&Co Special Tea
 - Single Tea
 - Masala Tea
 - Lemon Tea
 - Ginger Tea
 - Green Tea
 - Sugar Free Tea

12. Payment Mode

- Data Type: Picklist
- Values: Payment Mode Global Picklist
- Required

13. Associated Employer

- Data Type: Lookup Relationship
- Related To: Employer Account

14. Order Quantity

- Data Type: Formula
- Formula Return: Number

The Order Quantity formula calculates the quantity based on the selected products and chai items.

15. Total Bill

- Data Type: Formula
- Formula Return: Number

The Total Bill formula calculates the total amount based on the selected products and chai items.

Activity 3: Create Custom Fields for Enterprise Account

The following custom fields are created for the Enterprise Account object:

1. Enterprise Name
 - Data Type: Text
 - Length: 25
 - Required
2. Phone Number
 - Data Type: Phone
 - Required
3. Email ID
 - Data Type: Email
 - Required
4. Address
 - Data Type: Text
 - Length: 125
5. Type of Items
 - Data Type: Multi Select Picklist
 - Values: Type of Items Global Picklist
 - Required
6. Products purchased
 - Data Type: Multi Select Picklist
 - Values: Items Global Picklist
 - Required
7. Associated Employer
 - Data Type: Lookup Relationship
 - Related To: Employer Account

8. Order Quantity
 - Data Type: Formula
 - Formula Return: Number
9. Total Bill
 - Data Type: Formula
 - Formula Return: Number
10. Payment Mode
 - Data Type: Picklist
 - Values: Payment Mode Global Picklists

Milestone 7 - Page Layouts

For the personalized field view in Customer Accounts, two page layouts are created:

- Online Orders
- Walk-In Orders

Activity 1: Online Orders Page Layout

1. Go to the Setup page.
2. Click Object Manager.
3. Select Customer Account.
4. Click Page Layouts.
5. Click New.
6. Enter the Page Layout Name as Online Orders.
7. Click Save.
8. Drag and arrange all the required fields.
9. Click Save.

Activity 2: Walk-In Orders Page Layout

1. Go to the Setup page.
2. Click Object Manager.
3. Select Customer Account.
4. Click Page Layouts.

5. Click New.
6. Enter the Page Layout Name as Walk-In Orders.
7. Click Save.
8. Drag and arrange all the required fields.
9. Click Save.

Milestone 8 - Record Types

To differentiate the records and data stored in Customer Accounts, two different Record Types are created:

- Online Orders
- Walk-In Orders

Activity 1: Online Orders Record Type

1. Go to the Setup page.
2. Click Object Manager.
3. Select Customer Account.
4. Click Record Types.
5. Click New.
6. Enter the following details:
 - Existing Record Type: Master
 - Record Type Label: Online Order
 - Record Type Name: Auto Populates
 - Active: Tick the checkbox
7. Click Next.
8. Under Assign Page Layouts, select Apply one layout to all profiles.
9. Select Online Orders from the dropdown menu.
10. Click Save and New.

Activity 2: Walk-In Orders Record Type

1. Go to the Setup page.
2. Click Object Manager.

3. Select Customer Account.
4. Click Record Types.
5. Click New.
6. Enter the following details:
 - Existing Record Type: Master
 - Record Type Label: Walk-In Order
 - Record Type Name: Auto Populates
 - Active: Tick the checkbox
7. Click Next.
8. Under Assign Page Layouts, select Apply one layout to all profiles.
9. Select Walk-In Orders from the dropdown menu.
10. Click Save.

Milestone 9 - Validation Rules

Validation rules are implemented to ensure accurate data entry in the CRM application.

Activity 1: On Employer Account

Aadhar Number

1. Go to the Setup page.
2. Select Object Manager → Employer Account.
3. Click Validation Rules.
4. Click New.
5. Enter Rule Name: Aadhar Number.
6. Enter the required error condition formula.
7. Enter the error messages:
 - Aadhar number is required.
 - The Aadhar number must be 12 digits long.
 - Aadhar number can only contain numeric digits.
 - Aadhar number never starts with 0.
8. Click Save & New.

PAN Number

Create another validation rule with:

- Rule Name: PAN Number

The rule validates the PAN details and ensures that the entered information follows the required format.

Error messages include:

- The PAN Details field must not be blank.
- The PAN card number does not start with 0.
- The PAN card number does not contain special characters.

Click Save & New.

Phone Number

Create another validation rule with:

- Rule Name: Phone Number

The rule validates the phone number.

Error messages include:

- The phone number field must not be blank.
- The phone number must consist of exactly 10 digits.
- The phone number must contain only numeric digits.

Click Save.

Activity 2: On Customer Account

A Phone Number validation rule is created for the Customer Account object.

- Rule Name: Phone Number

The validation ensures that:

- The phone number field is not blank.
- The phone number consists of exactly 10 digits.
- The phone number contains only numeric digits.

Click Save.

Activity 3: On Enterprise Account

A Phone Number validation rule is created for the Enterprise Account object.

- Rule Name: Phone Number

The validation ensures that:

- The phone number field is not blank.
- The phone number consists of exactly 10 digits.
- The phone number contains only numeric digits.

Click Save.

Milestone 10 - Email Template

Activity 1: Email Template

An email template is created to send birthday offers to customers automatically.

1. Go to Setup.
2. In the Quick Find box, enter Email Template.
3. Click Classic Email Template.
4. Click New Email Template.
5. Select Text as the email template type.
6. Click Next.

Available Merge Fields

- Field Type: Customer Accounts Fields
- Field: First Name

The merge field value is copied and placed in the email body where required.

7. Folder: Unfiled Public Classic Email Templates
8. Select Available for Use.
9. Email Template Name: Birthday Offer Email
10. Subject: Special Birthday Offer Inside!

The email template is designed to send a personalized birthday message and a special offer to the customer.

11. Click Save.

Activity 2: Email Alert

1. Go to Setup.
2. In the Quick Find box, enter Email Alert.
3. Click Email Alert.
4. Click New Email Alert.
5. Enter:
 - Description: Happy Birthday email alert
 - Unique Name: Auto Populates
 - Object: Customer Account
 - Email Template: Birthday Offer Email
 - Recipient Type: Email Field – Email ID
 - From Email Address: Default Workflow User's email address
6. Click Save.

Note: Make sure that the Default Workflow User is assigned.

Milestone 11 - Flows

A Schedule-Triggered Flow is created to automate birthday offer emails.

Activity 1: Schedule Triggered Flow

1. Go to Setup.
2. Type Flow in the Quick Find box.
3. Click Flow.
4. Select New Flow.
5. Select Schedule-Triggered Flow.
6. Click Create.

Set a Schedule

- Start Date: Enter the date when the flow should start.
- Start Time: Enter the required time.
- Frequency: Daily

Create Object

- Object: Customer Account

- Condition Requirements: All Conditions Are Met (AND)

Conditions:

- Field: Date_of_Birthday_is_today__c
- Operator: Equals
- Value: \$GlobalConstant.True

And:

- Field: Email_ID__c
- Operator: IS NULL
- Value: \$GlobalConstant.False

7. Click the (+) icon on the Flow Builder.

8. Select Action Component.

9. In the New Action page:

- Filter By: Type
- Select: Email Alert
- Action: Happy Birthday email alert
- Label: Send Happy Birthday Email
- API Name: Auto Populates

10. Set the Record ID as:

{!\$Record.Id}

11. Click Done.

12. Click Save.

13. Flow Label: Happy Birthday Email Flow

14. Flow API Name: Auto Populates

15. Click Save.

16. Click A

Milestone 12 - Reports & Dashboards

Activity 1: Customer Account Sales Report

1. Click App Launcher.

2. Select TheChaiShop&Co.
3. Click Reports.
4. Click New Report.
5. In the search box, type Customer Accounts.
6. Select Customer Accounts.
7. Click Start Report.
8. Turn Update Preview Automatically ON.
9. Drag and drop all the required columns from the Outline pane.
10. Under Group Rows, search and select:
 - Customer Account: Record Type
11. Click Add Chart.
12. Click Save.
13. Enter:
 - Report Name: Customer Account Sales Report
 - Report Unique Name: Auto Populates
14. Click Save.

Activity 2: Enterprise Account Sales Report

1. Repeat the same steps to create another report.
2. Click Reports.
3. Click New Report.
4. Search for Enterprise Accounts.
5. Select Enterprise Accounts.
6. Click Start Report.
7. Turn Update Preview Automatically ON.
8. Drag and drop all the required columns from the Outline pane.
9. Under Group Rows, search and select:
 - Type of Items
10. Click Add Chart.

11. Click Save.

12. Enter:

- Report Name: Enterprise Account Sales Report
- Report Unique Name: Auto Populates

13. Click Save.

Activity 3: Dashboard

1. Click Dashboards.
2. Click New Dashboards.
3. Enter the name:

Customer Vs Enterprise Sales

4. Click Create.
5. Click Widget.
6. Select Chart or Table.
7. Select Customer Account Sales Report.
8. Under Display As, select the required visualization.
9. Click Add.
10. Repeat the same steps for the Enterprise Account Sales Report.
11. Click Save.

Milestone 13 - Conclusion

The development of TheChaiShop&Co CRM application marks a significant step in improving the store's operational efficiency and customer relationship management capabilities.

The application integrates employer details, customer information for both online and offline customers, and enterprise data. This helps streamline business processes and supports informed decision-making.

The automation of sales calculations, including order quantity and total bill amount, reduces manual errors and allows employees to focus on providing better customer service.

The automated email notification system sends birthday notifications and offers to customers. This supports personalized communication and improves customer engagement.

CHAPTER 7

FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify the correct system behavior. The functional testing was carried out to ensure that the major features of the “A CRM Application for TheChaiShop&Co” work correctly according to the defined requirements.

The following functionalities were tested:

7.1 Record Creation Testing

Record creation was tested for the following objects:

- Employer Account
- Customer Account
- Enterprise Account

The test verified that users could create and store the required records correctly in the Salesforce system.

7.2 Validation Rule Testing

Validation rules were tested to ensure that incorrect data entry was prevented.

The following fields were tested:

- Aadhar Number
- PAN Number
- Phone Number

The validation rules check the entered values and display appropriate error messages when invalid data is entered.

7.3 Record Types and Page Layout Testing

The Online Order and Walk-In Order record types were tested along with their corresponding page layouts.

The testing verified that the correct fields and layouts were displayed according to the selected record type.

7.4 Formula Field Testing

The formula fields were tested to verify the automatic calculation of:

- Order Quantity
- Total Bill

The testing ensured that the selected products and items were correctly calculated without requiring manual calculation.

7.5 Flow Execution Testing

The scheduled flow was tested to verify the automated birthday email notification process.

The flow checks the customer's birthday and email availability and triggers the Birthday Offer Email when the required conditions are satisfied.

7.6 Report and Dashboard Testing

Reports and dashboards were tested to verify that sales information was displayed correctly.

The following were tested:

- Customer Account Sales Report
- Enterprise Account Sales Report
- Customer Vs Enterprise Sales Dashboard

The testing ensured that the reports generated the required sales information and that the dashboard displayed the information using charts or tables.

7.7 Performance Testing

Performance testing was carried out to ensure fast response time and system stability during concurrent usage.

The testing verified that the Salesforce CRM application responds efficiently while users perform operations such as accessing records, generating reports, and viewing dashboards.

The system was also checked for stable performance during normal usage. The testing confirmed that the application provides smooth access to customer, employer, and enterprise information while supporting the required CRM operations.

CHAPTER 8

ADVANTAGES & DISADVANTAGES

8.1 Advantages

The “A CRM Application for TheChaiShop&Co” provides several advantages in managing customer information, sales activities, and business data. The major advantages of the system are:

- **Centralized Data Management**
Customer, employer, and enterprise information can be maintained in a centralized Salesforce CRM system.
- **Reduced Manual Work**
Automated processes reduce the need for manual data entry, calculations, and repetitive activities.
- **Automated Calculations**
The system automatically calculates order quantity and total bill amount, reducing calculation errors.
- **Improved Customer Engagement**
Automated birthday email notifications help maintain personalized communication with customers.
- **Real-Time Analytics**
Reports and dashboards provide real-time sales information that supports analysis and decision-making.

8.2 Disadvantages

Although the CRM application provides several benefits, it also has some limitations:

- **Requires Salesforce License**
The system depends on the Salesforce platform, which may require a Salesforce license for continued use.
- **Internet Dependency**
Since the application is cloud-based, an internet connection is required to access the system.
- **Limited Offline Access**
The system has limited functionality when users do not have internet connectivity.

CHAPTER 9

CONCLUSION:

The CRM Application for TheChaiShop&Co successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting.

The system helps to manage customer information, employer details, and enterprise data in a centralized Salesforce CRM platform. The automation of sales calculations, including order quantity and total bill amount, reduces manual errors and saves time.

The application also provides reports and dashboards for analyzing sales information and supporting business decision-making. Automated birthday email notifications improve customer communication and help enhance customer relationships.

Overall, the CRM application provides an efficient and organized approach to customer relationship management by combining data management, automation, reporting, and analytics within the Salesforce platform.

CHAPTER 10

FUTURE SCOPE

The CRM Application for TheChaiShop&Co can be further enhanced in the future by adding advanced features and integrations. The following improvements can extend the functionality of the existing CRM application:

10.1 Mobile CRM Integration

The CRM application can be integrated with mobile devices to provide easy access to customer, sales, and business information. This will allow users to access the CRM system conveniently from mobile devices.

10.2 AI-Based Sales Prediction

Artificial Intelligence can be used to analyze sales data and predict future sales trends. This can help the organization understand customer behavior and support better sales planning and decision-making.

10.3 WhatsApp/SMS Alerts

The system can be enhanced by integrating WhatsApp and SMS alerts. This can provide customers with timely notifications, updates, offers, and other important information.

10.4 Inventory Management

Inventory management can be added to the CRM application to maintain and monitor product stock details. This can help in tracking available products and supporting efficient business operations.

10.5 Multi-Branch Support

The CRM application can be extended to support multiple branches of TheChaiShop&Co. This will allow customer, sales, and business data from different branches to be managed through the CRM system.

10.6 Advanced Customer Profiling

Advanced customer profiling can be implemented to maintain detailed customer information and understand customer preferences. This can support personalized customer interactions and improve customer relationship management.

CHAPTER 11

APPENDIX

11.1 Source Code

The source code and implementation of the CRM application are based on **Salesforce Configuration & Flows**. The Salesforce configuration includes the required objects, fields, relationships, validation rules, record types, page layouts, email templates, email alerts, flows, reports, and dashboards.

11.2 Dataset

The dataset used in the CRM application consists of **Customer and Sales Records**. These records are used for maintaining customer information, managing sales details, calculating order quantity and total bill amount, and generating reports and dashboards.

11.3 Tools Used

The main tool used for developing and implementing the CRM application is the **Salesforce Developer Org**. The Salesforce environment provides the platform for configuring the CRM application, creating objects and fields, implementing automation, and generating reports and dashboards.

11.4 Project Title

A CRM Application for TheChaiShop&Co

11.5 Final Note

The CRM application was developed using Salesforce Configuration & Flows to manage customer and sales records efficiently. The appendix provides a summary of the source code, dataset, and development tool used for the project.
